

Vinodraj Jayaraman
Consultant Data Engineer

Experience	13 years			
Location	Chennai, IN			
Email	vinodraj.jayaraman@atos.net			
Summary	With twelve years of experience, Vinodraj is a skilled Data Engineer who specializes in Google Cloud Platform, Apache Airflow, and BigQuery. He excels in developing and optimizing data workflows, ensuring efficiency and reliability. Fluent in Python and C++, Vinodraj has a proven track record in enhancing application performance through strategic code modifications. His attention to detail is evident in his comprehensive code reviews, ensuring high standards of quality. Vinodraj's expertise in data engineering and his ability to effectively manipulate and analyze data make him a valuable asset to any team.

Education

Start Date	End Date	Name	Institute
08/2004	03/2008	B.E	SAACE

Certifications

Issue Date	Expiration Date	Name	Issuing Entity
03/2023		Atos Syntel Intro to Go Programming	HackerRank
03/2022		Communication Skills	Udemy
06/2021		Atos Syntel Python for Data Analysis L2	Mettl
04/2021		Atos Docker	Mettl
04/2021		Atos Syntel Python for Machine Learn. L1	Mettl
03/2021		Atos Python Basics	Mettl
04/2008		Bachelor Degree in Computer Science	Shri Andal Alagar College of Engineering

Professional experience: Assignment details

The Home Depot	
06/2023 – Present	
Title	Consultant Data Engineer
Responsibilities	Responsibilities • Participate in daily standup meetings, design sessions, story grooming, and retrospective meetings. • Engage in onsite-offshore calls, delivery, and defect triage calls. Plan, coordinate, facilitate, and support the deployment of new code changes or bug fixes to production. Develop and modify Apache Airflow DAGs/Tasks using Python

	to optimize workflow orchestration based on business requirements. • Provide technical support to resolve day-to-day issues encountered during the execution of Customer, Store, and Core fulfillment DAGs. • Perform load testing on Java applications, analyze performance metrics, and visualize results using Prometheus and Grafana. • Optimize Python application performance using profiling tools and monitoring data to improve responsiveness. • Implement proactive monitoring using Prometheus and Grafana to optimize resource utilization and identify bottlenecks. • Document technical specifications, deployment procedures, and troubleshooting guides to facilitate knowledge sharing and ensure consistency. • Create deployment documentation and troubleshooting guides to support efficient incident response and knowledge transfer.
Skills	Apache Airflow, Google Cloud BigQuery, Docker, English, GitHub, Google Cloud Composer, Google Cloud Platform, Google Pub/Sub, Grafana, Jupyter, Postman, Python

PayPal

01/2022 – 01/2023

Title	Consultant Software Developer
Responsibilities	Responsibilities • Spearheaded the refactoring of existing codebases by introducing a sophisticated inheritance-based design paradigm, enhancing maintainability and scalability. • Analyzed, designed, and executed change requests for C++ applications, ensuring seamless integration with existing systems. • Leveraged expertise in Python, Oracle, and Shell Scripting to develop and optimize stored procedures, craft intricate SQL queries for Oracle databases,

	and automate processes with shell scripts. • Provided pivotal support in the production environment, promptly delivering hot fixes to resolve critical issues and minimize downtime. • Conducted comprehensive code reviews across multiple languages including Shell Script, Python, AWK, PL/SQL, and C++, ensuring adherence to coding standards and best practices. • Held a pivotal role in the development lifecycle, spanning from initial development and enhancement to bug fixing and ongoing production support. • Meticulously monitored application performance to guarantee adherence to established key performance indicators (KPIs) and continuously optimized for efficiency. • Validated and tested demo applications, ensuring they met quality standards and customer requirements. • Developed Python scripts to efficiently retrieve and manipulate data, streamlining data processing and analysis workflows. • Demonstrated proficiency in utilizing Elmo, an internal tool, to efficiently manage ramp-up requests and conduct A/B testing, optimizing product performance and user experience. • Architected and implemented controller logic for applications based on the Elmo Framework, enhancing system efficiency and scalability.
Skills	C++, Jupyter, Matplotlib, NumPy, Pandas, Oracle PL/SQL, Putty, Python, Splunk, SQL
StateStreet	
10/2016 – 12/2021	
Title	Consultant
Responsibilities	Responsibilities • Spearheaded the analysis and gathering of business requirements specifications through extensive

	collaboration with SMEs and comprehensive review of business requirement documents. • Led the execution of build, deploy, and testing procedures in response to change requests, ensuring thorough validation before production deployment. • Proactively monitored production environments for any anomalies or spikes in resource utilization, swiftly addressing critical issues to minimize downtime and ensure continuous operation. • Developed comprehensive process flows to automate scheduling and ad-hoc requests, leveraging in-depth understanding of business process variants. • Collaborated closely with team members to develop Python and PowerShell scripts for automating various interfaces, streamlining workflow processes and improving productivity. • Enforced development best practices such as code reviews and unit testing to maintain code quality and ensure adherence to standards. • Took charge of issue reporting and resolution during testing phases, effectively identifying and resolving issues across diverse systems to ensure smooth project delivery.
Skills	Bash, Microsoft SQL Server, MySQL, Notepad++, Oracle PL/SQL, PL/SQL Developer, Python, SQLite
StateStreet	
04/2014 – 06/2016	
Title	Sr. Analyst
Responsibilities	Responsibilities • Developed Functions/Procedures in Teradata to align with project design specifications, ensuring efficient data processing and manipulation. • Utilized Teradata utilities such as BTEQ, MLoad, and FLoad to implement components for migration activities, adhering closely to project design guidelines. • Demonstrated proficiency in comprehending complex data models and translating them into

	comprehensive source-to-target mappings, facilitating accurate data transformations. • Conducted rigorous data quality checks using test data sets to ensure data accuracy and integrity throughout the migration process. • Wrote Shell scripts to handle CSV and text files in Unix environments, leveraging Sed and AWK commands for efficient file manipulation and creating trigger scripts as needed. • Coordinated closely with team members for the development, testing, and deployment of production changes, ensuring seamless collaboration and timely delivery. • Designed and developed stored procedures and queries in Teradata, leveraging expertise in optimizing database performance and efficiency. • Demonstrated proficiency in working with temporal tables, effectively managing historical data and implementing temporal data modeling techniques.
Skills	Oracle RDBMS, Python, Teradata

StateStreet

03/2013 – 04/2014

Title	Sr. Analyst
Responsibilities	Responsibilities Developed customized job scripts tailored to client specifications, ensuring seamless integration and efficient data processing. Orchestrated the creation of essential database objects including Tables, Views, Sequences, and Synonyms, optimizing database functionality and accessibility. Leveraged SQL-Loader and PL/SQL scripts to extract and transform data from external sources, facilitating smooth data integration processes. Provided comprehensive technical support for over 50 client instances deployed on-premises, resolving issues promptly and ensuring uninterrupted operations. Efficiently managed system processes and scheduling tasks within GECS Utilities, optimizing resource allocation and enhancing system performance.

	Administered user accounts, groups, and disk space, while closely monitoring system processes to ensure optimal functionality. - Automated critical processes using BatchScript and implemented robust monitoring solutions to track archiving thresholds and network utilization. - Proficiently utilized Oracle Loader and load utilities such as SQL*Plus and SQL-Loader for efficient data loading and manipulation. - Conducted thorough checkout processes within applications to validate data integrity and system functionality. - Monitored check-runs for timely data delivery, ensuring adherence to project timelines and client expectations. - Responsibly handled asset management tasks, promptly deleting assets as per client requests to maintain data security and compliance. - Played a key role in data delivery processes from SFTP servers, ensuring secure and efficient transfer of critical data assets.
Skills	Oracle PL/SQL, PL/SQL Developer
PayPal	
08/2012 – 03/2013	
Title	Software Engineer
Responsibilities	Responsibilities Led the design, development, and testing of software solutions utilizing a diverse technology stack including Python, Oracle, Teradata, and Unix Scripting for Email Campaign Management projects. Contributed to multiple development and testing cycles across various application releases, ensuring consistent quality and functionality. Demonstrated proficiency in leveraging Teradata utilities such as SQL, B-Teq, FastLoad, and MultiLoad for daily data loading operations, effectively managing large datasets from multiple flat file sources. Expertly administered databases by creating and maintaining database structures, including tables, triggers, functions, procedures, views, sequences, and synonyms.

	Demonstrated proficiency in performance tuning methodologies to enhance system efficiency and maintain optimal response times. • Played a key role in database design by analyzing requirements and implementing efficient database schemas. • Utilized advanced SQL techniques including joins and subqueries to streamline and optimize complex queries, improving overall query performance. • Orchestrated email notifications based on job statuses, enhancing communication and workflow efficiency. • Implemented robust logging mechanisms to capture and track information, errors, warnings, and other relevant data, facilitating effective troubleshooting and analysis.
Skills	Python, SQL, Teradata
